

Marketplace

Connect with your suppliers to shop, place orders, receive invoices and approve invoices for payment.

Jumpstart your enablement with a model that works for everyone.

Unimarket Marketplace takes the complexity out of shopping and supplier engagement by providing suppliers with one place to host catalogs, receive orders, send invoices and receive payments.

One of the biggest barriers to realizing the significant cost savings available from deploying an eProcurement solution continues to be the cost and time required to integrate with suppliers. Our Marketplace resolves this problem by allowing you to integrate just once with our existing Marketplace to gain access to our ever-growing community of integrated suppliers and their catalogs.

Even better, we continue to grow the number of suppliers in our Marketplace because suppliers enjoy access to valuable services such as hosting and managing their catalogs, receiving orders, sending invoices and getting paid electronically.

Empower your suppliers

Give suppliers the tools they need to manage their own company information, compliance documentation, online catalogs and integrated punchout eCommerce sites, so you don't have to.

Drive supplier adoption

To help drive supplier adoption, there is no limit on the number of suppliers you can enable, there is no cost for suppliers to enroll in our Marketplace, and we provide suppliers with full order, invoice and payment tools free of charge.

Align everyone's interests

Unimarket Premium Suppliers may pay additional fees based on the added value these suppliers derive from premium use of our Marketplace. These suppliers are interested in growing order volume through their participation in the marketplace. They want your business and they've aligned their interests with yours and ours to make it happen.

Let's *connect and talk* about how we can help you get procurement done right.

Put these features to work in your organization.

No rationalization

Because you integrate just once with our existing Marketplace to gain access to a large and growing community of integrated suppliers, you no longer need to rationalize or justify the cost of undertaking point-to-point supplier integration.

Long tail adoption

Our Marketplace provides scalable options that work for all sizes and types of suppliers. This allows you to transact electronically with small and mid-size suppliers that have never previously been available for you to interact with electronically.

Supplier invitations

Easily upload your entire supplier list and send suppliers who are not already in our Marketplace an invitation to register.

Shop supplier catalogs

Bringing all your suppliers into one marketplace makes it easy for your users to search and purchase across all of your suppliers' hosted catalogs and integrated eCommerce sites in one place.

Data capture

Suppliers register once and manage company and compliance information through their supplier self-service portal, ensuring that the supplier information you use is always accurate and up-to-date.

Complements existing solutions

Already have an eProcurement solution as part of your ERP? Leverage our Marketplace to connect with thousands of suppliers to avoid costly and time consuming point-to-point supplier integration.

Enablement and support

Our dedicated team of supplier marketplace experts work closely with you to enable your suppliers for catalogs, orders, invoices, payments and more.

Marketplace

Unimarket Procurement, Invoice Management and Marketplace are purpose-built to work together.

This ensures that the transition from shopping cart, to requisition and approval workflow, to purchase order, invoice and payment is completely seamless – for you and your suppliers.
